ABSTRACT
Be sure to also indicate if you are submitting a DESIGN or RESEARCH project in the "Abstract" section of your submission.

OVERVIEW
overview of the topic/software/device of interest tell me why you want to develop such a system

DESIGN IMPROVEMENTS
idea of what will be unique/better/improved in your system (versus what already exists this will be informed by your software survey)

CRITIQUE 1

Description
Brief description of the application.

User Goals
Identify the high-level goals of the user of such a system what is common to this type of application?

User Tasks
Identifying tasks the user must perform to achieve their goals.

Critique
How it's bad, bad, bad, good.

CRITIQUE 2

Description
Brief description of the application.

User Goals
Identify the high-level goals of the user of such a system what is common to this type of application?

User Tasks
Identifying tasks the user must perform to achieve their goals.

Critique
How it's bad, bad, bad, good.

HTC STOCKS

Description
HTC Stocks is a mobile Android application that comes installed on all HTC devices. This app allows the user to add stocks to their list of bookmarked stocks, view basic information about all stocks that they have bookmarked at the same time, and view detailed information about one stock at a time. The detailed stock view includes a graph of price history, high and low prices, and information about the values at open and close for the stock on the current day. The application is powered by Yahoo Finance.

User Tasks
For a user to find information about stocks they may be interested in through this application, they first need to add the stock in question to their favorites. Once this is done, the stock will appear in the users list of favourited stocks, where they can tap on it to see detailed information.
To view general information about all of the stocks that a user is following, all that the user needs to do is open the app. On the home view a list of all of the stocks that a user is currently following is displayed along with the current price of the stock, along with the absolute and relative changes in the stock's price over the trading day.

Critique
How it's bad, bad, bad, good.

CRITIQUE 4

Description
Brief description of the application.

User Goals
Identify the high-level goals of the user of such a system what is common to this type of application?

User Tasks
Identifying tasks the user must perform to achieve their goals.

Critique
How it's bad, bad, bad, good.

CONCLUSION
Paper conclusion (if we have one).
